BoF Session: To Do

(FIRST)
- Introductions and Interests

(SECOND)
- Brief overview of CHAOSS

(THIRD)
- Work together on the Growth-Maturity-Decline metric
  - What the activity metrics you would like to see?
  - What could the collection of these activity metrics signal to you?
  - How might you ascribe these signals to organizational or communal value?
- Report Back
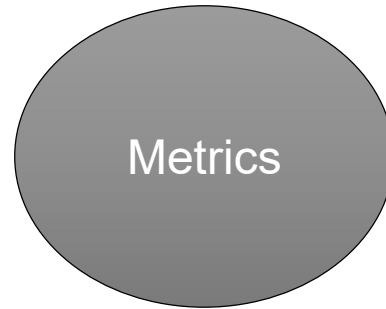

CHAOSS Overview

Code   Metrics

CHAOSS Overview

Prospector

Code   Metrics

CHAOSS Overview

The Metrics Committee

Code   Metrics

1. Risk
2. Diversity
3. Growth-Maturity-Decline
4. Ecosystem

Activity Metrics? → Signal? → Action?

Metrics

Growth-Maturity-Decline

Activity Metrics? → Signal? → Actions?

(yes, these may be very context specific – explain the context)

Decline

- Partner Up

- What the activity metrics you would like to see?
- Why these activity metrics?
    - What could the collection of these activity metrics signal to you?
    - How could you ascribe these signals to organizational or communal value?

- Report Back

What We Will Do

- Share the conversations on the Metrics listserv
- Refine necessary metrics on the CHAOSS Metrics wiki page
- Design, develop, and share proof-of-concept implementations

http://chaoss.community

Food for Thought

- How could metrics encourage negative behavior?

- How could metrics be used to define contributor rewards?

- How can diversity be defined?

- What are best ways to measure project impact within a software ecosystem?

- How can we consider risk as a key measure of community health?

Continued Session From Yesterday

- 12 Sep 2017 at 2 - 4pm
  - Spill over from today's conversion
  - Continue working on Growth-Maturity-Decline metric
  - Start exploring Food for Thought questions

- We are also open for ideas on what to talk about

- Diamond ballroom Salon 2 (~30 people)

Breakout

- Go to a table based on the four initial composite metrics:
  - Risk (? Naming ?)
  - Growth – maturity – decline (maybe just decline)
  - Diversity
  - Ecosystem Impact

Deliverables

- Shared case description – describing context for the metric
- What were the activity metrics (2-3) and why were they chosen?
- What do you think these metrics can signal?
- What actions can be associated with these signals?

- What are the potential positive or negative outcomes from this case?

Report!

What do you want from CHAOSS?

- What the artifacts that you would like to see from the Metrics committee?

- What are the best ways to participate in the development of these artifacts?

- What are we totally missing?

- How to involve people who are not here?

Picture!
