

OPENCHAIN

06-03-2019

Antitrust Policy Notice

- › Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.
- › Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at <http://www.linuxfoundation.org/antitrust-policy>. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrave of the firm of Gesmer Updegrave LLP, which provides legal counsel to the Linux Foundation.

Agenda

- Roll call
- Project Update
- Siemens on the Open Source Compliance Tool Chain
- OSADL on the Open Source License Obligations Checklists (OSLOC)

Project Update

- OpenChain will be making two major conformance announcements in India
- We expect to make a series of legal partner announcements this week:
 - 2 providers in Germany
 - 1 provider in China
- We just welcomed {metæffekt} as an automation partner in Germany
- We expect to make our first tooling partner announcement on Wednesday

Open Source Compliance Tool Chain

Meeting May 6th 2019: Open Chain

OSS Compliance Tool Chain

- 1 General description
- 2 Big Picture
- 3 Specific Elements
- 4 Resources

OSS Compliance Tool Chain

1 General description

2 Big Picture

3 Specific Elements

4 Resources

OSS Compliance Tool Chain why the OSS way

- a** Compliance is required by law
- b** We have a huge network of suppliers / their deliverables must be license compliant
- c** The compliance workflow / process needs to be part of the development / CI/CD process
- d** The tools need to be “orchestrable” as needed as well as adaptable as needed
- e** Budget constraints for license compliance work are given at all companies
- f** Installed legacy

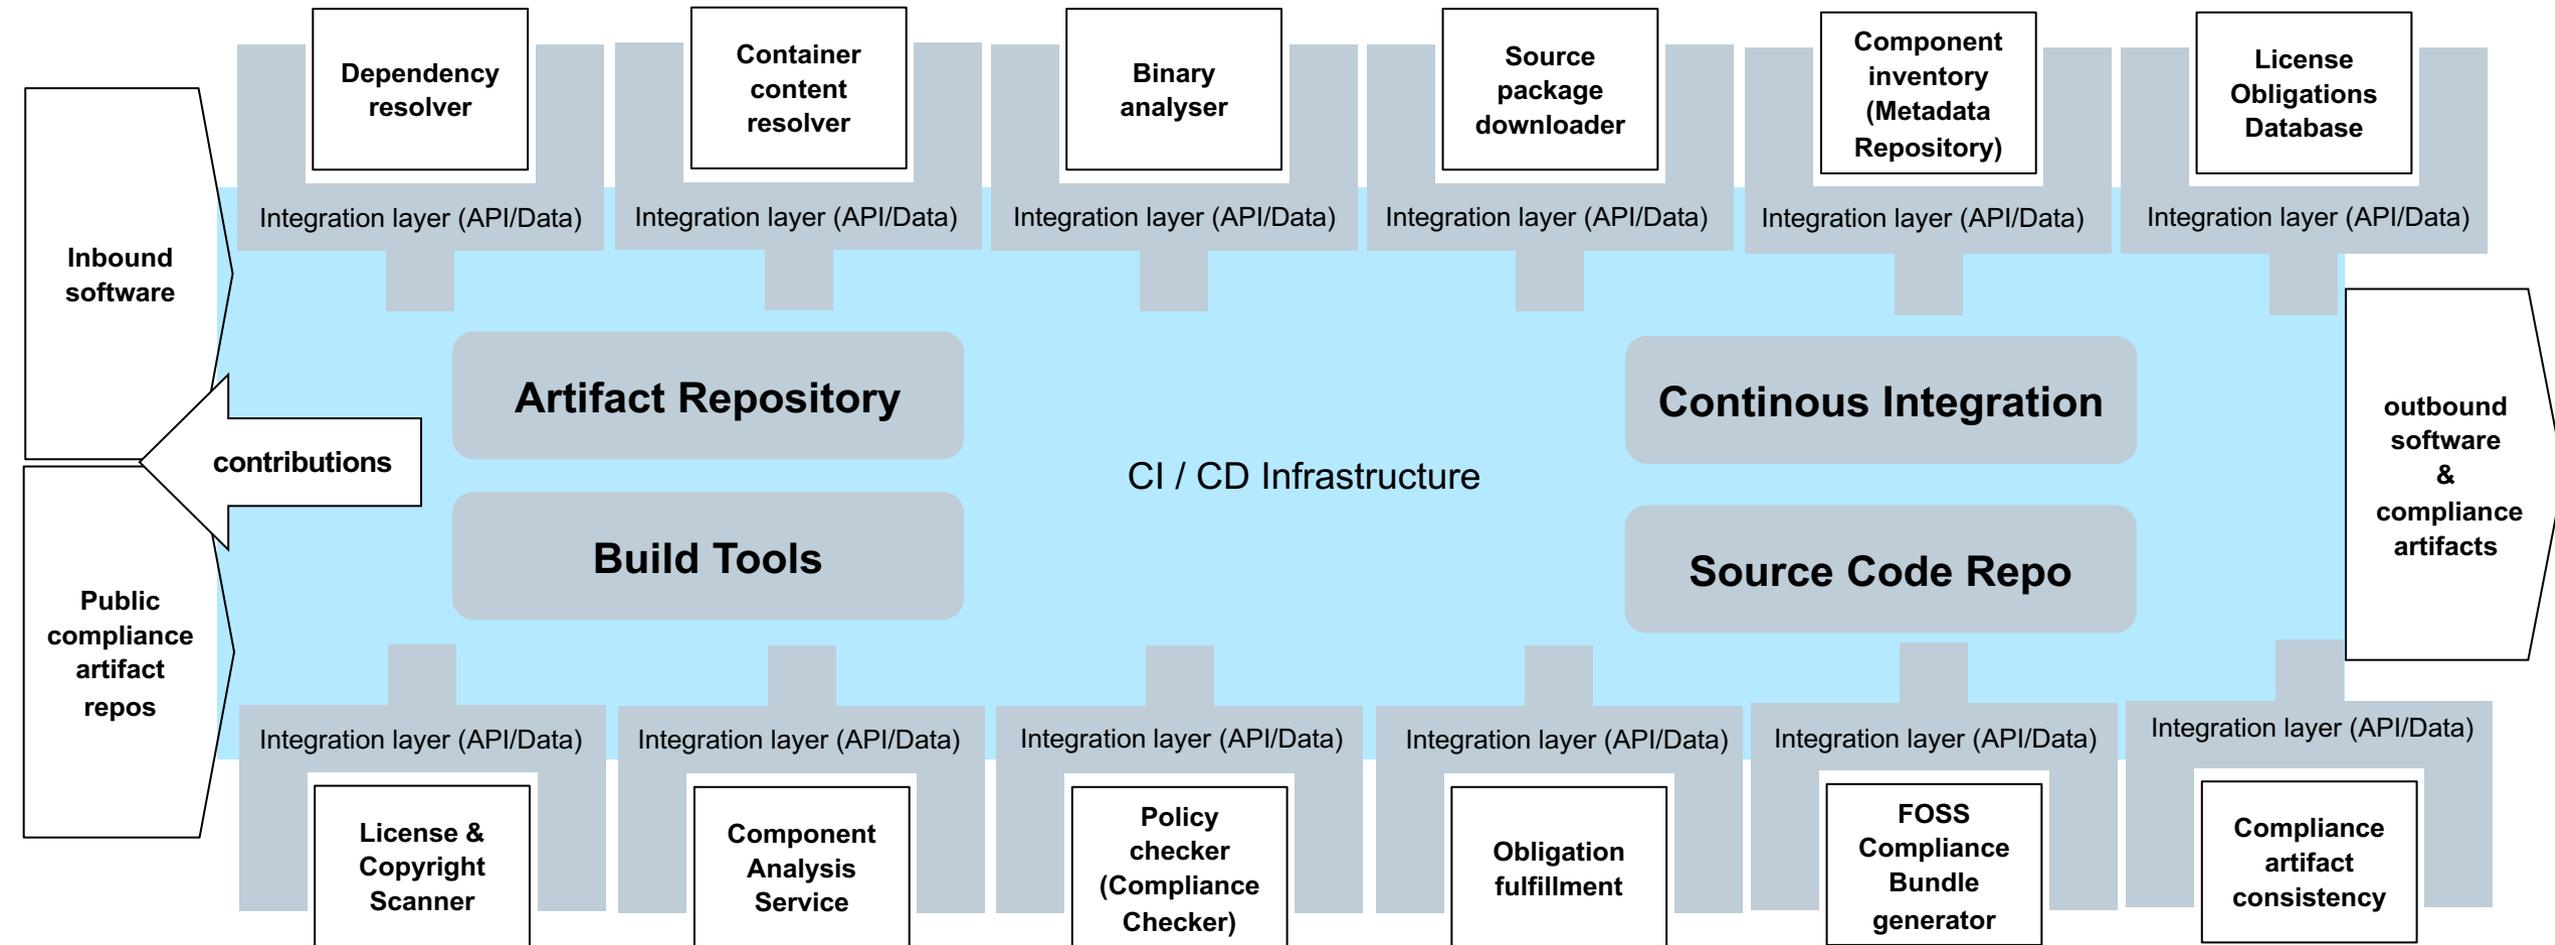

The only approach which copes with all constraints is an OSS based compliance toolchain

The Project “Sharing Creates Value”

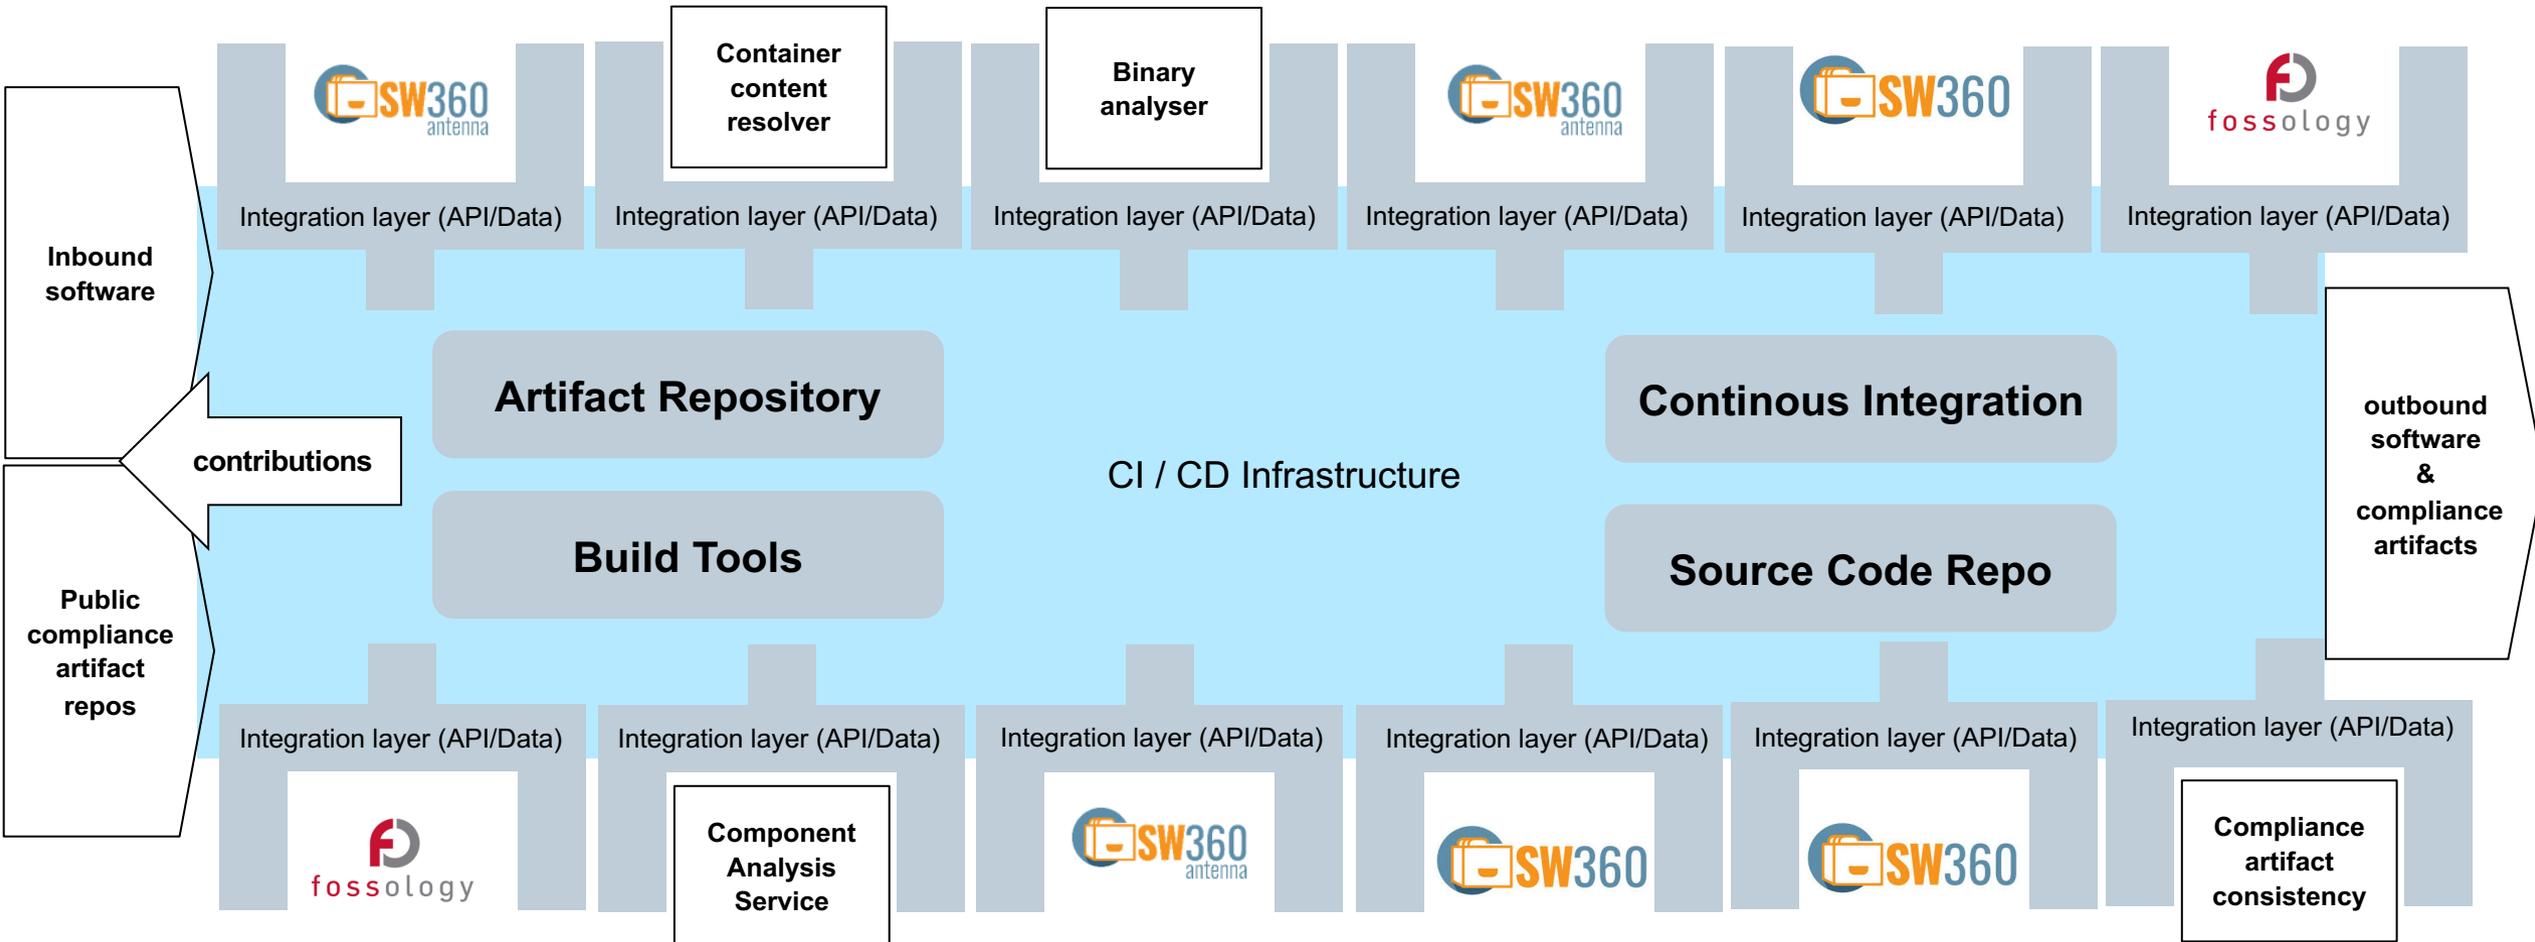

- a** “This repo realizes the idea that Open Source Software (OSS) compliance activities will be less expensive by applying OSS principles”
- b** Sharing OSS compliance artifacts
- c** “Combining the existing tools to an integrated OSS Compliance Tool Chain”

<https://github.com/Open-Source-Compliance/Sharing-creates-value>

Big Picture – Integrated Compliance Toolchain

Big Picture – Integrated Compliance Toolchain Instance

Conclusion and Plans

- a** Define and describe most relevant use cases
- b** Define a suited data model for implementing the use cases
- c** Define the interfaces to implement the use cases
- d** Implement use cases

Let's build an OSS compliance tool chain together, this is no differentiating business element – it is simply required by law

What are OSADL's Open Source License Obligations Checklists (OSLOC)?

- Open Source licenses are a subgroup of licenses with certain commonly agreed-on properties.
- A number of **common rights** are granted for Open Source software, but the **obligations** of different licenses may **vary greatly**. (Let OSI handle the rights, we need to handle the obligations.)
- The license obligations of **all licenses** contained in a project must be fulfilled.
- The challenge is to understand the obligations **expressed differently** in a wide variety of license texts.
- A common understanding of license obligations and **agreement among legal experts** are required.
- In addition, the **compatibility** of different Open Source licenses with each other and with proprietary licenses needs to be evaluated.
- OSADL took on this challenge and made checklists available in five steps:
 1. Define a common "obligation language",
 2. encode licenses,
 3. seek opinions,
 4. validate,
 5. publish.

Road map of OSADL's Open Source License Obligations Checklists (OSLOC)

- Create obligation language with canonical language elements, actions and terms ✓
e.g. YOU MUST *Forward* License text
- Add language elements to encode USE CASEs as well as COMPATIBILITY and PATENT hints ✓
- Transparently provide definitions, add text templates, generate a compatibility matrix ✓
- Provide a collaborative platform to encode, develop, reference and receive feedback on the checklists ✓
- Mandate a lawyer, if sufficient community feedback cannot be obtained ✓
- Make the checklists in raw data form publicly available so they can be used, for example, in scanning tools ✓
- Define procedures how to integrate the checklists into a company's Open Source policy of license clearing ✓
- Maintain a growing community of > 200 subscribers of the collaborative platform ✓
- Write to office@osadl.org if you want to participate ✓
